Art Unit: 1641

DETAILED ACTION

Election/Restrictions

- 1. Applicant's election without traverse of group I, claims 1, 3-12, 23, 25, 26, 28-30 and 36-37 in the reply filed on 10/16/2009 is acknowledged.
- 2. Claims 1-37 are pending, and claims 2,13-22,24,27,31-34 and 35-37 are withdrawn.
- 3. Claims 1, 3-12, 23, 25, 26, 28-30 and 36-37 are under examination.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1, 3-12, 23, 25, 26, 28-30 and 36-37 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims are drawn to polypeptides having functional equivalent to a particular protein, i.e. SET1. The phrase "functional equivalent" encompasses a genus. It is noted no disclosure of any functional equivalent in the specification.

To provide adequate written description and evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of complete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making

Application/Control Number: 10/594,291 Page 3

Art Unit: 1641

the claimed product, or any combination thereof. In this case, the only factor present in the claim is a partial structure in the form of a recitation of percent identity. Further, there is no identification of any particular portion of the structure that must be conserved. Accordingly, in the absence of sufficient recitation of distinguishing identifying characteristics, the specification does not provide adequate written description of the claimed genus.

Vas-Cath Inc. v. Mahurkar, 19USPQ2d 1111, clearly states "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the 'written description' inquiry, whatever is now claimed." (See page 1117.) The specification does not "clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." (See Vas-Cath at page 1116). As discussed above, the skilled artisan cannot envision the detailed chemical structure of the encompassed genus of polypeptides, and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method of isolating it. The compound itself is required. See Fiers v. Revel, 25 USPQ2d 1601 at 1606 (CAFC 1993) and Amgen Inc. v. Chugai Pharmaceutical Co. Ltd., 18 USPQ2d 1016.

One cannot describe what one has not conceived. See *Fiddes v. Baird*, 30 USPQ2d 1481 at 1483. In *Fiddes*, claims directed to mammalian FGF's were found to be unpatentable due to lack of written description for that broad class. The specification provided only the bovine sequence.

Therefore, only identified SET1 protein, but not the full breadth of the claim meets the written description provision of 35 U.S.C. §112, first paragraph. Applicant is reminded that *Vas-Cath* makes clear that the written description provision of 35 U.S.C. §112 is severable from its enablement provision.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/594,291

Art Unit: 1641

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 4

- 7. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 8. Claims 1, 3-12, 23, 25, 26, 28-30 and 36-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fraser et al. (Abstract Conference presentation, Australian Society of Immunology 10/12/2003; IDS information).

Fraser et al. discovered there exists a high affinity binding between human IgA and SET1 (See abstract). Although Fraser et al. do not explicitly teach using SET1 to isolate, remove or detect IgA protein, one ordinary skill in the art, when viewing this result, would have immediately been motivated to apply the SET1 as the binding molecule to capture IgA ligand in the sample because based on the high affinity between the IgA and SET1. Such binding relationship is a prerequisite to apply isolation/or purification process, such as using column chromotography having Sepharose matrix immobilized with IgA thereon to capture SET1 ligand in the sample. For the sample source, e.g. mammal, it is within reasonable expectation of success once using this method to detect/or isolate the IgA. Also, with respect to claim 12, it would have been

Application/Control Number: 10/594,291

Art Unit: 1641

obvious under In re Aller. "[W]here the general conditions of claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454,456, 105 USPQ 223, 235-236 (C.C.P.A. 1955). "No invention is involved in discovering optimum ranges of a process by routine experimentation." Id. At 458,105 USPQ at 236-237. "The discovery of an optimum value of a result effective variable is a known process is ordinary within the skill of the art." In re Boesch, 617 F.2d 272,276,205 USPQ 215, 218-219 (C.C.P.A. 1980). Applicant is invited to file affidavit under Rule 1.131/1.132 to predate Fraser's prior art.

Conclusion

9. No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JACOB CHEU whose telephone number is (571)272-0814. The examiner can normally be reached on 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Shibuya can be reached on 571-272-0806. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
